

# Cath lab

**Across**

- 1. Diagnosis when the heart is weakened
- 4. Medication used for pressure wire procedure
- 8. Device that creates cardiac output in a patient with cardiogenic shock
- 11. Penny's favorite color
- 14. What type of MI is occurring with ST elevation in leads II, III & AVF
- 15. Which valve are you calculating when you measure PCW & LV diastolic pressure simultaneously
- 16. What is it called when the coronary artery goes into the muscle

- 17. You always need two transducers when you measure a
- 18. The name of the extension used for Abbott interventional wires
- 19. Coronary artery that comes off the LAD
- 20. Type of EKG done to determine a RV infarct
- 21. A tear in the arterial wall that can occur with stent deployment or balloon inflation

**Down**

- 2. Communication between the right and left atria
- 3. A medication that reverses heparin

- 5. Name of the first drug eluting stent
- 6. Condition that causes chest pain on inspiration and ST elevation in all leads
- 7. Treatment for restrictive cardiomyopathy done in the lab
- 9. A complete penetration through the vessel wall caused by a wire
- 10. The coronary artery that feeds the anterior wall
- 12. Which valve is evaluated when measuring AO & LV systolic pressure
- 13. Severe complication caused by a coronary perforation
