

# Human/Global Impact

## Across

3. A measure of how much an individual consumes, expressed in area of land  
 4. Place where an organism lives  
 7. The removal of trees faster than forests can replace themselves.  
 12. species whose population size is rapidly declining and will become extinct if the trend continues  
 15. Habitat Destruction, Invasive Species, Population, Pollution, Overharvesting  
 16. plants and animals that have migrated to places where they are not native  
 17. Release of harmful materials into the environment  
 18. Large geographic area with a similar climate and ecosystem  
 19. Species that is likely to become endangered.

24. A group of individuals that belong to the same species and live in the same area  
 25. All the different populations that live together in an area  
 26. permanent elimination of a species from earth; irreversible loss  
 27. no longer present anywhere in the world; could be biotic or abiotic.  
 28. the use or extraction of a resource until it is depleted  
**Down**  
 1. The average weather conditions in an area over a long period of time  
 2. organism's role, or job, in its habitat  
 5. to use less of something  
 6. the living organisms in an ecosystem

8. The process of making new products from materials that were used in another product.  
 9. An increase in population over a period of time  
 10. A group of similar organisms that can breed and produce fertile offspring  
 11. the diversity of plant and animal life in a particular habitat (or in the world as a whole)  
 13. a piece of land where waste materials are dumped  
 14. a community of organisms and their abiotic environment  
 20. Any nonliving component of an environment  
 21. A low area of land that is built up from deposits of solid refuse in layers covered by soil.  
 22. using a resource over and over in the same form  
 23. the loss of living space due to human activity or catastrophic events
