

Earth, Oceans, and Weather Crossword

Across

- The transfer of heat from one place to another caused by movements of molecules
- The slow warming of Earth's atmosphere due to climate change
- Layers of gas that surround a planet
- A tool used to measure air pressure
- Weather system that produces heavy precipitation, winds, lightning, and thunder
- The transfer of thermal energy
- Frozen rain or precipitation in the form of ice pellets
- Process in which matter changes from a liquid to a gas
- A storm with strong winds and rain that forms over tropical waters
- A measure of how much water is in something
- A high-lying cloud that is small, high, patched clouds, in rows
- A low-lying cloud characterized by a thin, layered, sheet-like appearance
- Precipitation that forms ice crystals
- Angular distance north and south of the equator
- The movement of air due to atmospheric pressure differences
- Extremely cold climate located near the North and South Poles and on the tops of mountains; receives very little precipitation and has no trees

Down

- Low to mid level clouds. Dark, widespread, and formless
- Small, icy balls that fall from the sky
- The average weather conditions in an area
- A region of low pressure with counter-clockwise wind rotation developing into a hurricane or tropical storm
- The force that air puts on an area
- A hurricane or tropical storm originating in the Pacific Ocean
- Anvil-shaped cloud that is often involved in heavy or violent storms: AKA thunderheads
- A rotating, funnel-shaped cloud
- A funnel-shaped cloud or column of air that rotates at high speeds and extends downward from a cloud to the ground
- Water that is released from clouds in the sky, including rain, snow, sleet, hail, and freezing rain
- The study of patterns of weather
- Thin, wispy looking clouds; commonly found at heights greater than 6km
- In weather, the boundary between two masses of air with different properties
- Large, fluffy, white clouds, often seen in fair skies
