## The Heart

## **Across**

- **2.** Recording of electrical change accompanying the cardiac cycle
- **6.** Period of the cardiac cycle when relaxing
- **7.** Blood is transported away from the heart
- **9.** Amount of blood pumped in a single contraction.
- **10.** Double layered membrane that surrounds the heart

- **12.** High elevation in diastolic or systolic blood pressure
- **13.** Chamber of the hear that receives oxygenated blood from the lungs.

## **Down**

- 1. The middle layer of the heart, responsible for pumping. Composed of cardiac muscle
- **3.** Vein thats vessels transport oxygenated blood from the lungs back to the heart

- **4.** Rapid, irregular heart contractions.
- **5.** Separates the heart into the right and left pumps
- **8.** \_\_\_\_\_ valve that contains flaps between the right atrium and the right ventricle. Prevents back flow of blood.
- **11.** Routes blood pumped from the left ventricle to the rest of the body.
