Date:

The Circulatory and Respiratory Systems

Across

- 2. The main passageway into the lungs
- 4. Tube that connects the larynx to the bronchi of the lungs.
- 5. Transport blood toward the heart
- 10. An organ system that moves substances to and from cells. Helps stabilize body temperature 8. Muscular organ that pumps blood through and pH. Consists of a heart, blood vessels, and blood.
- 11. Carry blood away from the heart
- 1. a set of organs that allows a person to breathe and exchange oxygen and carbon dioxide throughout the body.
- 3. Where the body inhales air

- **6.** Connects to the nostrils, allows air to move from the nose to the larynx (voice box) in the process of breathing.
- 7. Red liquid that circulates in the arteries and veins of humans and other vertebrate animals
- the circulatory system by rhythmic contraction and dilation.
- 9. help oxygen from the air inhaled enter the red cells in the blood. The red blood cells carry the oxygen through the body.
