# Math 1

Across

4. A cube of a whole number.
5. The number that indicates how many times the base is used as a factor.
6. Equations that have the same solution.
7. A number raised to the third power.
8. The number in front of a variable.
10. A square of a whole number.
12. Angle that measures 90 degrees.
14. The middle value in an ordered set of numbers.
17. Operations that undo one another.
20. Straight path that extends without an end in opposite directions.
21. The difference between the greatest and the least data values for a set of data.

23. A plane formed by the intersection of a horizontal number line (x-axis) and a vertical number line (y-axis)
24. One of the two equal factors of a number.
26. The set of whole numbers and their opposites.
27. Irrational and rational numbers.
28. Figure formed by two rays with a common endpoint called the vertex.

Down

1. A data value that is much higher or lower than the other data values in the set.
2. Flat surface that extends forever.
3. Integers that differ by one.
9. A number that cannot be expressed as a fraction.

11. Any number that can be expressed as a fraction.
13. An equation involving two or more variables.
15. Numbers 1-9
16. A pair of numbers that can be used to locate a point on a coordinate plane.
18. Part of a line that starts at one endpoint and extends forever.
19. Having the same size and shape
22. An exact location in space.
25. Part of a line between two endpoints.
