Name: _____ Date: _____

S5E1a. Constructive and Destructive Forces

Across

6. Land features that are deep, v-shaped valleys, formed by water erosion

8. This is the process that builds up Earth's surface and landforms

9. Land features that form when eroded sediment drops at the mouth of the river

10. Moves sediment from one place to another by wind, water, ice, gravity, and organisms

Down

1. Processes that wear away Earth's surface features and landforms

2. When sediment is released or dropped

3. Landforms that open to a pool of molten rock that can be changed due to destructive and constructive processes

4. Land features that from when eroded sediment drops and builds up through the process of deposition

5. Tallest landform on Earth that may go through changes due to destructive processes

7. The breaking of larger rocks into smaller pieces called sediment
