## The Water Cycle

## <u>Across</u>

2. \_\_\_\_\_\_ is a continuous process
 4. oceans, lakes, river are all

**8.** source of energy for the water cycle

**9.** the place where most of the evaporation and precipitation occur

10. having a consistency like that of water or oil, i.e., flowing freely but of constant volume.11. rain, snow, sleet, or hail that falls to the ground.

**12.** a large natural elevation of the earth's surface rising abruptly from the surrounding level; a large steep hill.

**13.** an airlike fluid substance which expands freely to fill any space available, irrespective of its quantity.

14. the process of a substance in a liquid state changing to a gaseous state due to an increase in temperature and/or pressure.
15. water, from rain, snowmelt, or other sources, that flows over the land surface, and is a major component of the water cycle.

## <u>Down</u>

**1.** a visible mass of condensed water vapor floating in the atmosphere, typically high above the ground.

**3.** The gradual gathering of something

**5.** moisture condensed from the atmosphere that falls visibly in separate drops

6. water that collects as droplets on a cold surface when humid air is in contact with it.

**7.** a substance normally liquid suspended in the air
