# COMPONENTS OF A CIRCUIT

## Across

- 5. to provide electrical energy
- 6. Connects the components together.
- 7. To measure current strength.
- 8. converts electrical energy into sound energy
- 9. a resistors whose resistance can be adjusted higher or lower.

10. to measure voltage or potential difference

## Down

- 1. stops the flow of current
- 2. allows the flow of current
- 3. A component that opposes or inhibits electrical current in a circuit.
- 4. to convert electrical energy into light energy
