

Name: _____

Date: _____

Immune System

Across

4. A type of lymphocyte that engages in cell-mediated immunity.
6. It is a group of proteins in the blood that are concerned with phagocytosis.
7. Antibodies produced by plasma cells in response to antigenic stimulation?
8. It is immunity against one's own tissue.
10. It is the ability to resist and overcome injury by pathogens or antigenic substances.
12. It is an enlarged monocyte that eats foreign material.

13. They are substances produced by a virus-infected cell.

15. A short-acting immunity achieved when the person is given antibodies made by another.

16. A foreign substance or antigen that stimulates an allergic reaction?

18. The body's response to infection or injury.

Down

1. What is immunity achieved when the body makes antibodies against antigen?

2. What are substances that react with a specific antigen?

3. Lymphocytes that engage in antibody-mediated immunity.

5. group of proteins in the blood that are concerned with phagocytosis

9. What is the eating of pathogens or cellular debris?

11. This is a group of cells that come from a single cell; genetically identical.

14. What is a macromolecule that elicits an immune response by lymphocytes?

17. It is antigens that have been altered in order to produce active immunity without causing the disease.
