

# UNIT 5: FOOD

**Across**

- 2. Is artificial of application of water to land assist in the production of crop
- 3. Is plant crops in strips or between shrub or trees.
- 11. Is when reduces erosion on steep slopes by cutting ridges or steps into the land
- 16. Something that make drains or flows off as rain that flows off from the land in streams
- 17. The business of felling trees and cutting then into logs transporting to logs to sawmills or to market
- 18. Is chemical substance that an animal or insect that attract other animals or insects and especially a mate
- 20. Is a land of a capable being ploughed and used to grow crops
- 21. Is when the fertile soil that the clay and sand containing humus
- 22. Is process by which a non saline soil becomes a saline by the irrigation of land with brackish water
- 24. Is plant rows across the contour of land that create mini dams
- 25. Is when components from one place to another

- 26. Is when organic compounds including fats, oils, and cholesterol
- 27. Is the amount of present in each serving of food
- 28. A organic compound that essential in minute amounts to the growth and health of animal
- 29. Is a farm on a large numbers of live stock the raised indoors in conditions intended to maximize
- 31. Is a obtained from living things from their remains

**Down**

- 1. Is substance found in foods that important part of the human diet
- 4. Is destructive insect other animal that attacks crops, food, livestock, etc
- 5. Is an open mine that especially a coal mine, that whose seams out crops run close to ground level and exposed by the removal of topsoil and overbureden
- 6. Is heavily that the vegetation is damaged and the ground become liable to erosion
- 7. A chemical element in nitrogen, phosphorus, which relatively large quantities are essential to growth in health plant

- 8. Unhealthy condition that results that not eating enough food or not eating enough healthy food
- 9. Is earthy matter or fine sand like carried by moving or running water that deposited as a sediment
- 10. Is a large group of organic compounds occurring in food and livings tissues that including sugar, starch, and cellulose
- 12. Is a type of land that degradation which a relatively dry land region becomes increasingly arid that bodies of water as well as vegetation and wild life
- 13. Is when a brown or black material in the soil that formed when plants and animals decay
- 14. Is when plant rows across the contour of land to create mini dams
- 15. a way to grow crops or past from year to year without disturbing the soil through tillage
- 19. Is when a person who makes an effort to eat food that is grown in raised and produced in locally, within 100 miles from there home
- 23. Is a extreme scarcity of food
- 30. Is a stiff sticky fine-grained earth is typically yellow, red or bluish-gray in color and often an impermeable of layer in the soil
