

## **Across**

**2.** vegetation consisting chiefly of tangled shrubs and thorny bushes

**4.** a vast, flat, treeless Arctic region of Europe, Asia, and North America in which the subsoil is permanently frozen

5. a gradual increase in the overall temperature of the earth's atmosphere
8. rainfall made sufficiently acidic by atmospheric pollution that it causes environmental harm, typically to forests and lakes

**9.** the branch of biology that deals with the relations of organisms to one another and to their physical surroundings

**10.** the trapping of the sun's warmth in a planet's lower atmosphere due to the greater transparency of the atmosphere to visible radiation from the sun than to infrared radiation emitted from the planet's surface.

**13.** The first trophic level in a food chain in which it serves as a food source for consumers or for higher trophic levels

14. to be none living

**17.** the regions of the surface, atmosphere, and hydrosphere of the earth (or analogous parts of other planets) occupied by living organisms.

**18.** A factor present in an environment that controls a process, particularly the growth, abundance or distribution of a population of organisms in an ecosystem

**19.** An organism that generally obtains food by feeding on other organisms or organic matter due to lack of the ability to manufacture own food from inorganic sources

**20.** A type of natural resource that cannot be replenished or takes time for nature to produce or replenish in order to sustain the rate of consumption.

## Down

1. a grassy plain in tropical and subtropical regions, with few trees

**3.** An ecological succession that occurs following an opening of uninhabited, barren habitat or that occurs on an environment that is devoid of vegetation and usually lacking topsoil

**6.** a resource that can be renewed as quickly as it is used up

7. the presence in or introduction into the environment of a substance or thing that has harmful or poisonous effects:

**11.** the sometimes swampy coniferous forest of high northern latitudes

**12.** a group of interdependent organisms of different species growing or living together in a specified habitat

**15.** resulting from living things

**16.** an organism, especially a soil bacterium, fungus, or invertebrate, that decomposes organic material
