

# Mitosis and Miosis

**Across**

- 4. What breaks down before the chromosomes separate?
- 12. What is the fourth phase of cell division?
- 14. What is it called when errors occur during mitosis?
- 15. What is one example of human cells aren't produced by mitosis?
- 16. What cells does meiosis occur?
- 17. What process do prokaryotic cells go through for division?
- 19. What is Mitosis? A form of cell division that allows cells to reproduce and

- 20. What phase is the reversal of prophase?
- 21. What part of mitosis is not really a phase but a separate phase?
- 22. What is created after the chromosome have already duplicated?

**Down**

- 1. What cells does mitosis occur in?
- 2. What is one example of cell division diseases caused by errors?
- 3. What is it called when animal cells change shape during mitosis?
- 5. What disappears as the nuclear envelope disappears?

- 6. How does the rest of the cell divide after the chromosomes have already duplicated?
- 7. This phase is only found in plant cells?
- 8. What is the cell division of bacterium often called?
- 9. What are the original cells called before division?
- 10. What is cell division of animal cells often called?
- 11. What are the two duplicated cells called?
- 13. What is it called when three or more daughter cells are produced?
- 18. What is the second phase of cell division?
