

# Weathering ,Soil, Erosion,and Deposition

## Across

2. The starting material of rock.  
 5. A mixture of weathered rock.  
 9. The shape and steepness of the landscape.  
 10. A process that causes chemical weathering oxygen, air, and iron are present..  
 11. The small holes and spaces between rocks, soil, and clay.

12. The laying down or settling of eroded material.  
 13. The removal of weathered materials from one place to another.  
 14. Physical processes break down rock.

## Down

1. Changes rock into new material.  
 3. The average weather of an area.

4. The mechanical and chemical processes of breaking down rock.  
 6. Changing once living material into dark colored organic matter.  
 7. The remains of something that was once alive.  
 8. Layers of soil from the movement of the products of weathering.

## Word Bank

topography	parent rock	mechanical weather	soil
erosion	climate	horizon	pores
decomposition	organic matter	weathering	deposition
chemical weathering	oxidation
