

Physical Geography

Across

- 2.** A small fertile green area in a desert region, usually having a spring or a well
- 5.** Narrow strip of land, connecting two larger bodies of land, surrounded on both sides by water
- 7.** A long, narrow arm of the sea bordered by steep cliff, usually formed by glacial erosion
- 8.** An expanse of sand or pebbles along a shore
- 13.** A natural stream of water of fairly large size flowing in a definite course

- 14.** Land formation, less extensive than a plateau, having steep walls and a relatively flat top

- 15.** Vast body of salt water that covers almost three fourths of the earth's surface

- 16.** A body of water forming an indentation of the shore, larger than a cove, smaller than a gulf

- 17.** An isolated hill or mountain rising abruptly above the surrounding land

Down

- 1.** Extended mass of ice formed from snow falling and accumulating over the years and moving very slowly

- 3.** Low wet land, often treeless, growth of grasses and cattails

- 4.** A sand hill or sand ridge formed by the wind

- 6.** a steep flow of water in a water course from a height

- 9.** A stream that flows to a larger stream or other body of water

- 10.** A ridge of rocks or sand, often of coral debris, at or near the surface of the water

- 11.** A nearly flat deposit of branches of the mouth of a river into the sea.

- 12.** Deep valley with steep side, often with a stream
